EXPERIENCE

Full Stack Developer - Development of a film and motor management system

WEB application that combines the development of two Rest API servers and a **React.js** client side. Architecture was planned before the development began and divided into Data and Business layers.

Server side: The servers were developed by Node.js and **Express**, communication between the servers is done by **(CRUD) Rest**. The servers maintain a database implemented by **MongoDB** and object modeling was performed by Mongoose and the routers on the servers were secured using **Express-jwt**

Client side: Developed in **React.js** and **Redux**, Design pattern, the design is implemented with the help of **Material-UI**.

The app has a division of privileges, only authorized users are allowed to perform actions

Full Stack Developer - Development of a web site for A Factory management

WEB application that combines the development of two **ASP.NET** servers and **Angular** client side. Architecture was planned before the development began and divided into Data and Business layers

Server side: The servers were developed by **ASP.NET** and **SQL Management Studio**, communication between the servers is done by Web Methods **(CRUD) Rest**. The servers maintain a database implemented by **SQL Management**.
